0.3	Examples of topologies: The trivial topology . . . . .	1
0.4	Examples of topologies: The discrete topology . . . . .	1

### 0.1 Topologies

### 0.2 Topologies on sets

$T$  is a topology on set  $X$  if:

- $X \in T$
- $\emptyset \in T$
- Unions of  $T$  are in  $T$
- Intersections of  $T$  are in  $T$

### 0.3 Examples of topologies: The trivial topology

The trivial topology contains only the underlying set and the empty set.

### 0.4 Examples of topologies: The discrete topology

The discrete topology contains all subsets of the underlying set (is this the power set?)
