

0.1 Rolle's theorem

0.1.1 Rolle's theorem

Take a real function $f(x)$ on closed interval $[a, b]$, differentiable on (a, b) , and $f(a) = f(b)$.

Rolle's theorem states that:

$$\exists c \in (a, b)(f'(c) = 0)$$

Generalised Rolle's theorem states that:

Generalised Rolle's theorem implies Rolle's theorem, so we only need to prove the generalised theorem.
